

# Anti-Human KGF Antibody

Catalog # ABG10330

## Product Information

---

|                    |            |
|--------------------|------------|
| <b>Application</b> | WB, IHC, E |
| <b>Reactivity</b>  | Human      |
| <b>Host</b>        | Rabbit     |
| <b>Clonality</b>   | Polyclonal |

## Additional Information

---

|                             |                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Preparation</b>          | Produced from sera of rabbits pre-immunized with highly pure (>98%) recombinant hKGF. Anti-Human KGF specific antibody was purified by affinity chromatography employing immobilized hKGF matrix.                                                                                                                                                                |
| <b>WesternBlot</b>          | To detect hKGF by Western Blot analysis this antibody can be used at a concentration of 0.1 - 0.2 $\mu$ g/ml. Used in conjunction with compatible secondary reagents the detection limit for recombinant hKGF is 1.5 - 3.0 ng/lane, under either reducing or non-reducing conditions.                                                                            |
| <b>Sandwich</b>             | To detect hKGF by sandwich ELISA (using 100 $\mu$ l/well antibody solution) a concentration of 0.5 - 2.0 $\mu$ g/ml of this antibody is required. This antigen affinity purified antibody, in conjunction with BioGems's Biotinylated Anti-Human KGF (60-198BT) as a detection antibody, allows the detection of at least 0.2 - 0.4 ng/well of recombinant hKGF. |
| <b>Immunohistochemistry</b> | This antibody stained formalin-fixed, paraffin-embedded sections of normal human skin. The recommended concentration is 0.5 $\mu$ g/ml overnight at 4°C. An HRP-labeled polymer detection system was used with a non-alcohol soluble AEC chromogen and a proteinase K antigen retrieval. Optimal concentrations and conditions may vary.                         |
| <b>Neutralization</b>       | To yield one-half maximal inhibition [ND <sub>50</sub> ] of the biological activity of hKGF (25 ng/ml), a concentration of 0.56-0.85 $\mu$ g/ml of this antibody is required.                                                                                                                                                                                    |
| <b>Formulation</b>          | A sterile filtered antibody solution was lyophilized from PBS, pH 7.2.                                                                                                                                                                                                                                                                                           |
| <b>Reconstitution</b>       | Centrifuge vial prior to opening. Reconstitute in sterile water to a concentration of 0.1-1.0 mg/ml.                                                                                                                                                                                                                                                             |
| <b>Storage</b>              | -20°C                                                                                                                                                                                                                                                                                                                                                            |
| <b>Precautions</b>          | Anti-Human KGF Antibody is for research use only and not for use in diagnostic or therapeutic procedures.                                                                                                                                                                                                                                                        |

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
