| <b>Subcellular Localization</b> | Cytoplasm. Nucleus. Nucleus, PML body. Endoplasmic reticulum. Mitochondrion matrix. Interaction with BANP promotes nuclear localization. Recruited into PML bodies together with CHEK2. Translocates to mitochondria upon oxidative stress.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Tissue Specificity</b>       | Ubiquitous. Isoforms are expressed in a wide range of normal tissues but in a tissue-dependent manner. Isoform 2 is expressed in most normal tissues but is not detected in brain, lung, prostate, muscle, fetal brain, spinal cord and fetal liver. Isoform 3 is expressed in most normal tissues but is not detected in lung, spleen, testis, fetal brain, spinal cord and fetal liver. Isoform 7 is expressed in most normal tissues but is not detected in prostate, uterus, skeletal muscle and breast. Isoform 8 is detected only in colon, bone marrow, testis, fetal brain and intestine. Isoform 9 is expressed in most normal tissues but is not detected in brain, heart, lung, fetal liver, salivary gland, breast or intestine.. |
| <b>Source</b>                   | Eukaryota                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Contents</b>                 | Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol, 0.4-0.5mg/ml BSA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Function</b>          | <p>Multifunctional transcription factor that induces cell cycle arrest, DNA repair or apoptosis upon binding to its target DNA sequence (PubMed:<a href="#">11025664</a>, PubMed:<a href="#">12524540</a>, PubMed:<a href="#">12810724</a>, PubMed:<a href="#">15186775</a>, PubMed:<a href="#">15340061</a>, PubMed:<a href="#">17317671</a>, PubMed:<a href="#">17349958</a>, PubMed:<a href="#">19556538</a>, PubMed:<a href="#">20673990</a>, PubMed:<a href="#">20959462</a>, PubMed:<a href="#">22726440</a>, PubMed:<a href="#">24051492</a>, PubMed:<a href="#">24652652</a>, PubMed:<a href="#">35618207</a>, PubMed:<a href="#">36634798</a>, PubMed:<a href="#">38653238</a>, PubMed:<a href="#">9840937</a>). Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type (PubMed:<a href="#">11025664</a>, PubMed:<a href="#">12524540</a>, PubMed:<a href="#">12810724</a>, PubMed:<a href="#">15186775</a>, PubMed:<a href="#">15340061</a>, PubMed:<a href="#">17189187</a>, PubMed:<a href="#">17317671</a>, PubMed:<a href="#">17349958</a>, PubMed:<a href="#">19556538</a>, PubMed:<a href="#">20673990</a>, PubMed:<a href="#">20959462</a>, PubMed:<a href="#">22726440</a>, PubMed:<a href="#">24051492</a>, PubMed:<a href="#">24652652</a>, PubMed:<a href="#">38653238</a>, PubMed:<a href="#">9840937</a>). Negatively regulates cell division by controlling expression of a set of genes required for this process (PubMed:<a href="#">11025664</a>, PubMed:<a href="#">12524540</a>, PubMed:<a href="#">12810724</a>, PubMed:<a href="#">15186775</a>, PubMed:<a href="#">15340061</a>, PubMed:<a href="#">17317671</a>, PubMed:<a href="#">17349958</a>, PubMed:<a href="#">19556538</a>, PubMed:<a href="#">20673990</a>, PubMed:<a href="#">20959462</a>, PubMed:<a href="#">22726440</a>, PubMed:<a href="#">24051492</a>, PubMed:<a href="#">24652652</a>, PubMed:<a href="#">38653238</a>, PubMed:<a href="#">9840937</a>). One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of Bcl-2 expression (PubMed:<a href="#">12524540</a>, PubMed:<a href="#">17189187</a>). Its pro-apoptotic activity is activated via its interaction with PPP1R13B/ASPP1 or TP53BP2/ASPP2 (PubMed:<a href="#">12524540</a>). However, this activity is inhibited when the interaction with PPP1R13B/ASPP1 or TP53BP2/ASPP2 is displaced by PPP1R13L/iASPP (PubMed:<a href="#">12524540</a>). In cooperation with mitochondrial PPIF is involved in activating oxidative stress-induced necrosis; the function is largely independent of transcription. Induces the transcription of long intergenic non-coding RNA p21 (lincRNA-p21) and lincRNA-Mkln1. LincRNA-p21 participates in TP53-dependent transcriptional repression leading to apoptosis and seems to have an effect on cell-cycle regulation. Implicated in Notch signaling cross-over. Prevents CDK7 kinase activity when associated to CAK complex in response to DNA damage, thus stopping cell cycle progression. Isoform 2 enhances the transactivation activity of isoform 1 from some but not all TP53-inducible promoters. Isoform 4 suppresses transactivation activity and impairs growth suppression mediated by isoform 1. Isoform 7 inhibits isoform 1-mediated apoptosis. Regulates the circadian clock by repressing CLOCK-BMAL1-mediated transcriptional activation of PER2 (PubMed:<a href="#">24051492</a>).</p> |

(PubMed:22726440) Translocates to mitochondria in response to mitomycin C treatment (PubMed:27323408). Competitive inhibition of TP53 interaction with HSPA9/MOT-2 by UBXN2A results in increased protein abundance and subsequent translocation of TP53 to the nucleus (PubMed:24625977) [Isoform 2]: Nucleus. Cytoplasm. Note=Localized mainly in the nucleus with minor staining in the cytoplasm [Isoform 4]: Nucleus. Cytoplasm. Note=Predominantly nuclear but translocates to the cytoplasm following cell stress [Isoform 8]: Nucleus. Cytoplasm. Note=Localized in both nucleus and cytoplasm in most cells. In some cells, forms foci in the nucleus that are different from nucleoli

## Tissue Location

Ubiquitous. Isoforms are expressed in a wide range of normal tissues but in a tissue-dependent manner. Isoform 2 is expressed in most normal tissues but is not detected in brain, lung, prostate, muscle, fetal brain, spinal cord and fetal liver. Isoform 3 is expressed in most normal tissues but is not detected in lung, spleen, testis, fetal brain, spinal cord and fetal liver. Isoform 7 is expressed in most normal tissues but is not detected in prostate, uterus, skeletal muscle and breast. Isoform 8 is detected only in colon, bone marrow, testis, fetal brain and intestine. Isoform 9 is expressed in most normal tissues but is not detected in brain, heart, lung, fetal liver, salivary gland, breast or intestine
