

# Anti-STAT3 Rabbit Monoclonal Antibody

Catalog # ABO13575

## Product Information

---

|                          |                                                                                                                      |
|--------------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>Application</b>       | WB, IHC, IF, ICC, IP                                                                                                 |
| <b>Primary Accession</b> | <a href="#">P40763</a>                                                                                               |
| <b>Host</b>              | Rabbit                                                                                                               |
| <b>Isotype</b>           | Rabbit IgG                                                                                                           |
| <b>Reactivity</b>        | Human                                                                                                                |
| <b>Clonality</b>         | Monoclonal                                                                                                           |
| <b>Format</b>            | Liquid                                                                                                               |
| <b>Description</b>       | Anti-STAT3 Rabbit Monoclonal Antibody . Tested in WB, IHC, ICC/IF, IP applications. This antibody reacts with Human. |

## Additional Information

| <b>Subcellular Localization</b> | Cytoplasm. Nucleus. Shuttles between the nucleus and the cytoplasm. Translocated into the nucleus upon tyrosine phosphorylation and dimerization, in response to signaling by activated FGFR1, FGFR2, FGFR3 or FGFR4. Constitutive nuclear presence is independent of tyrosine phosphorylation. Predominantly present in the cytoplasm without stimuli. Upon leukemia inhibitory factor (LIF) stimulation, accumulates in the nucleus. The complex composed of BART and ARL2 plays an important role in the nuclear translocation and retention of STAT3. Identified in a complex with LYN and PAG1. |
| <b>Tissue Specificity</b>       | Heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Function</b>            | <p>Signal transducer and transcription activator that mediates cellular responses to interleukins, KITLG/SCF, LEP and other growth factors (PubMed:<a href="#">10688651</a>, PubMed:<a href="#">11294841</a>, PubMed:<a href="#">12359225</a>, PubMed:<a href="#">12873986</a>, PubMed:<a href="#">15194700</a>, PubMed:<a href="#">15653507</a>, PubMed:<a href="#">16285960</a>, PubMed:<a href="#">17344214</a>, PubMed:<a href="#">18242580</a>, PubMed:<a href="#">18782771</a>, PubMed:<a href="#">22306293</a>, PubMed:<a href="#">23084476</a>, PubMed:<a href="#">28262505</a>, PubMed:<a href="#">32929201</a>, PubMed:<a href="#">38404237</a>). Once activated, recruits coactivators, such as NCOA1 or MED1, to the promoter region of the target gene (PubMed:<a href="#">15653507</a>, PubMed:<a href="#">16285960</a>, PubMed:<a href="#">17344214</a>, PubMed:<a href="#">18782771</a>, PubMed:<a href="#">28262505</a>, PubMed:<a href="#">32929201</a>). May mediate cellular responses to activated FGFR1, FGFR2, FGFR3 and FGFR4 (PubMed:<a href="#">12873986</a>). Upon activation of IL6ST/gp130 signaling by interleukin-6 (IL6), binds to the IL6-responsive elements identified in the promoters of various acute-phase protein genes (PubMed:<a href="#">12359225</a>). Activated by IL31 through IL31RA (PubMed:<a href="#">15194700</a>). Acts as a regulator of inflammatory response by regulating differentiation of naive CD4(+) T-cells into T-helper Th17 or regulatory T-cells (Treg): acetylation promotes its transcription activity and cell differentiation while deacetylation and oxidation of lysine residues by LOXL3 inhibits differentiation (PubMed:<a href="#">28065600</a>, PubMed:<a href="#">28262505</a>). Involved in cell cycle regulation by inducing the expression of key genes for the progression from G1 to S phase, such as CCND1 (PubMed:<a href="#">17344214</a>). Mediates the effects of LEP on melanocortin production, body energy homeostasis and lactation (By similarity). May play an apoptotic role by transactivating BIRC5 expression under LEP activation (PubMed:<a href="#">18242580</a>). Cytoplasmic STAT3 represses macroautophagy by inhibiting EIF2AK2/PKR activity (PubMed:<a href="#">23084476</a>). Plays a crucial role in basal beta cell functions, such as regulation of insulin secretion (By similarity). Following JAK/STAT signaling activation and as part of a complex with NFATC3 and NFATC4, binds to the alpha-beta E4 promoter region of CRYAB and activates transcription in cardiomyocytes (By similarity). Involved in the oncostatin-M-mediated signaling pathway through both type I OSM receptor complex (heterodimers composed of LIFR and IL6ST) and type II OSM receptor complex (heterodimers composed of OSMR and IL6ST) (PubMed:<a href="#">9188471</a>).</p> |
| <b>Cellular Location</b>   | <p>Cytoplasm. Nucleus Note=Shuttles between the nucleus and the cytoplasm (PubMed:29162862) Translocated into the nucleus upon tyrosine phosphorylation and dimerization, in response to signaling by activated FGFR1, FGFR2, FGFR3 or FGFR4 (PubMed:15653507, PubMed:16285960). Constitutive nuclear presence is independent of tyrosine phosphorylation. Predominantly present in the cytoplasm without stimuli. Upon leukemia inhibitory factor (LIF) stimulation, accumulates in the nucleus. The complex composed of BART and ARL2 plays an important role in the nuclear translocation and retention of STAT3. Identified in a complex with LYN and PAG1. Translocates to the nucleus in the presence of EDN1 (By similarity). {ECO:0000250   UniProtKB:P52631, ECO:0000269   PubMed:15653507, ECO:0000269   PubMed:16285960, ECO:0000269   PubMed:29162862}</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Tissue Location</b>     | Heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas. Expressed in naive CD4(+) T cells as well as T-helper Th17, Th1 and Th2 cells                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
