

Anti-Phospho-RIP3 (S232) Rabbit Monoclonal Antibody

Catalog # ABO16665

Product Information

Application	WB
Primary Accession	Q9Y572
Host	Rabbit
Isotype	Rabbit IgG
Reactivity	Mouse
Clonality	Monoclonal
Format	Liquid
Description	Anti-Phospho-RIP3 (S232) Rabbit Monoclonal Antibody . Tested in WB applications. This antibody reacts with Mouse.

Additional Information

Gene ID	11035
Other Names	Receptor-interacting serine/threonine-protein kinase 3, 2.7.11.1, RIP-like protein kinase 3, Receptor-interacting protein 3, RIP-3, RIPK3 (HGNC:10021)
Calculated MW	56887
Application Details	WB 1:500-1:2000
Source	Eukaryota
Contents	Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol, 0.4-0.5mg/ml BSA.
Clone Names	Clone: 31R36
Immunogen	A synthesized peptide derived from human Phospho-RIP3 (S232)
Purification	Affinity-chromatography
Storage	Store at -20°C for one year. For short term storage and frequent use, store at 4°C for up to one month. Avoid repeated freeze-thaw cycles.

Protein Information

Name	RIPK3 (HGNC:10021)
Function	Serine/threonine-protein kinase that activates necroptosis and apoptosis, two parallel forms of cell death (PubMed: 19524512 , PubMed: 19524513 , PubMed: 22265413 , PubMed: 22265414 , PubMed: 22421439 , PubMed: 29883609 , PubMed: 32657447). Necroptosis, a programmed cell death process in response to death-inducing TNF family members, is

triggered by RIPK3 following activation by ZBP1 (PubMed:[19524512](#), PubMed:[19524513](#), PubMed:[22265413](#), PubMed:[22265414](#), PubMed:[22421439](#), PubMed:[29883609](#), PubMed:[32298652](#)). Activated RIPK3 forms a necrosis-inducing complex and mediates phosphorylation of MLKL, promoting MLKL localization to the plasma membrane and execution of programmed necrosis characterized by calcium influx and plasma membrane damage (PubMed:[19524512](#), PubMed:[19524513](#), PubMed:[22265413](#), PubMed:[22265414](#), PubMed:[22421439](#), PubMed:[25316792](#), PubMed:[29883609](#)). In addition to TNF-induced necroptosis, necroptosis can also take place in the nucleus in response to orthomyxoviruses infection: following ZBP1 activation, which senses double-stranded Z-RNA structures, nuclear RIPK3 catalyzes phosphorylation and activation of MLKL, promoting disruption of the nuclear envelope and leakage of cellular DNA into the cytosol (By similarity). Also regulates apoptosis: apoptosis depends on RIPK1, FADD and CASP8, and is independent of MLKL and RIPK3 kinase activity (By similarity). Phosphorylates RIPK1: RIPK1 and RIPK3 undergo reciprocal auto- and trans-phosphorylation (PubMed:[19524513](#)). In some cell types, also able to restrict viral replication by promoting cell death-independent responses (By similarity). In response to Zika virus infection in neurons, promotes a cell death-independent pathway that restricts viral replication: together with ZBP1, promotes a death-independent transcriptional program that modifies the cellular metabolism via up-regulation expression of the enzyme ACOD1/IRG1 and production of the metabolite itaconate (By similarity). Itaconate inhibits the activity of succinate dehydrogenase, generating a metabolic state in neurons that suppresses replication of viral genomes (By similarity). RIPK3 binds to and enhances the activity of three metabolic enzymes: GLUL, GLUD1, and PYGL (PubMed:[19498109](#)). These metabolic enzymes may eventually stimulate the tricarboxylic acid cycle and oxidative phosphorylation, which could result in enhanced ROS production (PubMed:[19498109](#)).

Cellular Location

Cytoplasm, cytosol. Nucleus {ECO:0000250|UniProtKB:Q9QZL0}. Note=Mainly cytoplasmic Present in the nucleus in response to influenza A virus (IAV) infection. {ECO:0000250|UniProtKB:Q9QZL0}

Tissue Location

Highly expressed in the pancreas. Detected at lower levels in heart, placenta, lung and kidney

Images

Western blot analysis of Phospho-RIP3 (S232) expression in L929 cell lysate.
