

# Anti-TNF alpha (Infliximab), Human IgG1 Antibody

Catalog # ABV11791

## **Product Information**

| Application       | FC, E             |
|-------------------|-------------------|
| Primary Accession | <u>P01375</u>     |
| Reactivity        | Human             |
| Host              | Recombinant       |
| Clonality         | Monoclonal        |
| Isotype           | Human IgG1, kappa |
| Calculated MW     | 25644             |

### **Additional Information**

| Gene ID                                | 7124  |
|--|---|
| Alias Symbol<br>Other Names            | TNF<br>TNF-α; TNFα; TNFSF; Tumor necrosis factor; Cachectin; TNF-alpha; Tumor<br>necrosis factor ligand superfamily member 2; TNF-a; TNFa |
| Appearance                             | Colorless liquid  |
| Formulation                            | 200   |
| Reconstitution & Storage               | -20 °C  |
| Background Descriptions<br>Precautions | Anti-TNF alpha (Infliximab), Human IgG1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.        |

#### **Protein Information**

| Name     | TNF   |
|----------|---|
| Synonyms | TNFA, TNFSF2  |
| Function | Cytokine that binds to TNFRSF1A/TNFR1 and TNFRSF1B/TNFBR. It is mainly secreted by macrophages and can induce cell death of certain tumor cell lines. It is potent pyrogen causing fever by direct action or by stimulation of interleukin-1 secretion and is implicated in the induction of cachexia, Under certain conditions it can stimulate cell proliferation and induce cell differentiation. Impairs regulatory T- cells (Treg) function in individuals with rheumatoid arthritis via FOXP3 dephosphorylation. Up-regulates the expression of protein phosphatase 1 (PP1), which dephosphorylates the key 'Ser-418' residue of FOXP3, thereby inactivating FOXP3 and rendering Treg cells functionally defective (PubMed:23396208). Key mediator of cell death in |

the anticancer action of BCG-stimulated neutrophils in combination with DIABLO/SMAC mimetic in the RT4v6 bladder cancer cell line (PubMed:<u>16829952</u>, PubMed:<u>22517918</u>, PubMed:<u>23396208</u>). Induces insulin resistance in adipocytes via inhibition of insulin-induced IRS1 tyrosine phosphorylation and insulin-induced glucose uptake. Induces GKAP42 protein degradation in adipocytes which is partially responsible for TNF-induced insulin resistance (By similarity). Plays a role in angiogenesis by inducing VEGF production synergistically with IL1B and IL6 (PubMed:<u>12794819</u>). Promotes osteoclastogenesis and therefore mediates bone resorption (By similarity).

**Cellular Location** 

Cell membrane; Single-pass type II membrane protein [Tumor necrosis factor, soluble form]: Secreted [C-domain 2]: Secreted.

## Background

Cytokine that binds to TNFRSF1A/TNFR1 and TNFRSF1B/TNFBR. It is mainly secreted by macrophages and can induce cell death of certain tumor cell lines. It is potent pyrogen causing fever by direct action or by stimulation of interleukin-1 secretion and is implicated in the induction of cachexia, Under certain conditions it can stimulate cell proliferation and induce cell differentiation. Impairs regulatory T-cells (Treg) function in individuals with rheumatoid arthritis via FOXP3 dephosphorylation. Upregulates the expression of protein phosphatase 1 (PP1), which dephosphorylates the key 'Ser-418' residue of FOXP3, thereby inactivating FOXP3 and rendering Treg cells functionally defective (PubMed:23396208). Key mediator of cell death in the anticancer action of BCG-stimulated neutrophils in combination with DIABLO/SMAC mimetic in the RT4v6 bladder cancer cell line.
