Protein Information

Name TLE1

Function Transcriptional corepressor that binds to a number of transcription factors.

Inhibits NF-kappa-B-regulated gene expression. Inhibits the transcriptional activation mediated by FOXA2, and by CTNNB1 and TCF family members in Wnt signaling. Enhances FOXG1/BF- 1- and HES1-mediated transcriptional repression (By similarity). The effects of full-length TLE family members may be modulated by association with dominant-negative AES. Unusual function

as coactivator for ESRRG.

Cellular Location Nucleus. Note=Nuclear and chromatin-associated, depending on isoforms

and phosphorylation status. Hyperphosphorylation decreases the affinity for

nuclear components

Tissue Location In all tissues examined, mostly in brain, liver and muscle
