Protein Information

Name	ATIC (HGNC:794)
Function	Bifunctional enzyme that catalyzes the last two steps of purine biosynthesis (PubMed: 11948179 , PubMed: 14756554). Acts as a transformylase that incorporates a formyl group to the AMP analog AICAR (5-amino-1-(5-phospho-beta-D-ribosyl)imidazole-4-carboxamide) to produce the intermediate formyl-AICAR (FAICAR) (PubMed: 10985775 ,

PubMed:[11948179](#), PubMed:[9378707](#)). Can use both 10-formyldihydrofolate and 10-formyltetrahydrofolate as the formyl donor in this reaction (PubMed:[10985775](#)). Also catalyzes the cyclization of FAICAR to inosine monophosphate (IMP) (PubMed:[11948179](#), PubMed:[14756554](#)). Is able to convert thio-AICAR to 6-mercaptopurine ribonucleotide, an inhibitor of purine biosynthesis used in the treatment of human leukemias (PubMed:[10985775](#)). Promotes insulin receptor/INSR autophosphorylation and is involved in INSR internalization (PubMed:[25687571](#)).
