Protein Information

Name	ALDH1A3
Synonyms	ALDH6 {ECO:0000303 PubMed:7698756}
Function	Catalyzes the NAD-dependent oxidation of aldehyde substrates, such as all-trans-retinal and all-trans-13,14-dihydroretinal, to their corresponding carboxylic acids, all-trans-retinoate and all-trans- 13,14-dihydroretinoate, respectively (By similarity) (PubMed: 27759097). High specificity for all-trans-retinal as substrate, can also accept acetaldehyde as substrate in vitro but with lower affinity (PubMed: 27759097). Required for the biosynthesis of normal levels of retinoate in the embryonic ocular and nasal regions; a critical lipid in the embryonic development of the eye and the nasal region (By similarity).
Cellular Location	Cytoplasm {ECO:0000250 UniProtKB:Q9JHW9}.
Tissue Location	Expressed at low levels in many tissues and at higher levels in salivary gland,

stomach, and kidney
