

CD45RB Antibody [Clone BRA-11; same as BRA-11G]

Purified Mouse Monoclonal Antibody Catalog # AH10088

Product Information

ApplicationFCPrimary AccessionP08575ReactivityHumanHostMouseClonalityMonoclonalIsotypeIgG1, kappa

Clone Names BRA-11; same as BRA-11G

Calculated MW 147486

Additional Information

Gene ID 5788

Other Names Receptor-type tyrosine-protein phosphatase C, Leukocyte common antigen,

L-CA, T200, CD45, PTPRC, CD45

Target/Specificity Non-T, non-B CALLA positive ALL cell line REH (Leucocyte Workshop IV and V)

Application Note Flow Cytometry 2.5ul (0.5ug) per test per one million cells.

Format 0.5 ml at 200ug/ml; Conjugated to PE

Storage Store at 2 to 8°C.Antibody is stable for 24 months.

Precautions CD45RB Antibody [Clone BRA-11; same as BRA-11G] is for research use only

and not for use in diagnostic or therapeutic procedures.

Protein Information

Name PTPRC (HGNC:9666)

Synonyms CD45

Function Protein tyrosine-protein phosphatase required for T-cell activation through

the antigen receptor (PubMed:35767951). Acts as a positive regulator of T-cell coactivation upon binding to DPP4. The first PTPase domain has enzymatic activity, while the second one seems to affect the substrate specificity of the first one. Upon T-cell activation, recruits and dephosphorylates SKAP1 and FYN. Dephosphorylates LYN, and thereby modulates LYN activity (By similarity). Interacts with CLEC10A at antigen presenting cell-T cell contact; CLEC10A on immature dendritic cells recognizes Tn antigen- carrying

PTPRC/CD45 receptor on effector T cells and modulates T cell activation

threshold to limit autoreactivity.

Cellular Location Cell membrane; Single-pass type I membrane protein. Membrane raft.

Synapse. Note=Colocalized with DPP4 in membrane rafts.

Tissue Location Isoform 1: Detected in thymocytes. Isoform 2: Detected in thymocytes.

Isoform 3: Detected in thymocytes. Isoform 4: Not detected in thymocytes. Isoform 5: Detected in thymocytes. Isoform 6: Not detected in thymocytes.

Isoform 7: Detected in thymocytes Isoform 8: Not detected in thymocytes.

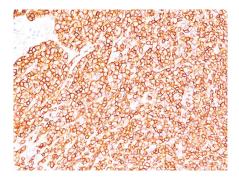

Background

CD45R, also designated CD45 and PTPRC, has been identified as a transmembrane glycoprotein, broadly expressed among hematopoietic cells. Multiple isoforms of CD45R are distributed throughout the immune system according to cell type. These isoforms arise because of alternative splicing of exons 4, 5, and 6. The corresponding protein domains are characterized by the binding of monoclonal antibodies specific for CD45RA (exon 4), CD45RB (exon 5), CD45RC (exon 6) and CD45RO (exons 4 to 6 spliced out). The variation in these isoforms is localized to the extracellular domain of CD45R, while the intracellular domain is conserved. CD45R functions as a phosphor-tyrosine phosphatase. Antibody to CD45 is useful in differential diagnosis of lymphoid tumors from non-hematopoietic undifferentiated neoplasms.
