

# Renal Cell Carcinoma / gp200 Antibody - With BSA and Azide

Mouse Monoclonal Antibody [Clone SPM314] Catalog # AH10817

#### **Product Information**

**Application** WB, IF, FC, IHC-P

Primary Accession Q16790
Other Accession 768, 63287
Reactivity Human, Horse

**Host** Mouse **Clonality** Monoclonal

**Isotype** Mouse / IgG2b, kappa

Clone Names SPM314 Calculated MW 49698

## **Additional Information**

Gene ID 768

**Other Names** Carbonic anhydrase 9, 4.2.1.1, Carbonate dehydratase IX, Carbonic anhydrase

IX, CA-IX, CAIX, Membrane antigen MN, P54/58N, Renal cell

carcinoma-associated antigen G250, RCC-associated antigen G250, pMW1,

CA9, G250, MN

**Application Note** WB~~1:1000 IF~~1:50~200 FC~~1:10~50 IHC-P~~N/A

**Format** 200ug/ml of Ab purified from Bioreactor Concentrate by Protein A/G.

Prepared in 10mM PBS with 0.05% BSA & 0.05% azide. Also available

WITHOUT BSA & azide at 1.0mg/ml.

**Storage** Store at 2 to 8°C.Antibody is stable for 24 months.

**Precautions** Renal Cell Carcinoma / gp200 Antibody - With BSA and Azide is for research

use only and not for use in diagnostic or therapeutic procedures.

#### **Protein Information**

Name CA9

Synonyms G250, MN

**Function** Catalyzes the interconversion between carbon dioxide and water and the

dissociated ions of carbonic acid (i.e. bicarbonate and hydrogen ions).

Nucleus. Nucleus, nucleolus. Cell membrane; Single-pass type I membrane

**Cellular Location** protein. Cell projection, microvillus membrane; Single-pass type I membrane

protein. Note=Found on the surface microvilli and in the nucleus, particularly

in nucleolus

**Tissue Location** Expressed primarily in carcinoma cells lines. Expression is restricted to very

few normal tissues and the most abundant expression is found in the

epithelial cells of gastric mucosa

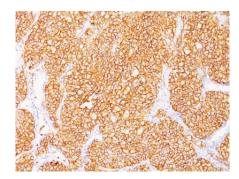

# **Background**

Recognizes a glycoprotein of ~200kDa, identified as carbonic anhydrase IX (CAIX/gp200). Its epitope resides in the carbohydrate domain of gp200. It shows no significant cross-reactivity with other carbohydrate determinants, such as the Lewis blood group antigens, epithelial membrane antigen, HMFG, and AB blood group antigens. In normal kidney, gp200 is localized along the brush border of the pars convoluta and pars recta segments of the proximal tubule, as well as focally along the luminal surface of Bowman's capsule adjoining the outgoing proximal tubule. Reportedly, gp200 is expressed by 93% of primary and 84% of metastatic renal cell carcinomas. This MAb may be useful in the investigations of carcinomas of proximal nephrogenic differentiation especially those showing tubular differentiation.
