

CD32 (Fc Gamma RIIa) Antibody - With BSA and Azide

Mouse Monoclonal Antibody [Clone 8.7] Catalog # AH11202

Product Information

ApplicationIF, FCPrimary AccessionP12318Other Accession2212, 352642ReactivityHumanHostMouseClonalityMonoclonal

Isotype Mouse / IgG1, kappa

Clone Names 8.7 Calculated MW 35001

Additional Information

Gene ID 2212

Other Names Low affinity immunoglobulin gamma Fc region receptor II-a, IgG Fc receptor

II-a, CDw32, Fc-gamma RII-a, Fc-gamma-RIIa, FcRII-a, CD32, FCGR2A, CD32,

FCG2, FCGR2A1, IGFR2

Application Note IF~~1:50~200 FC~~1:10~50

Storage Store at 2 to 8°C.Antibody is stable for 24 months.

Precautions CD32 (Fc Gamma RIIa) Antibody - With BSA and Azide is for research use

only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name FCGR2A

Synonyms CD32, FCG2, FCGR2A1, IGFR2

Function Binds to the Fc region of immunoglobulins gamma. Low affinity receptor. By

binding to IgG it initiates cellular responses against pathogens and soluble

antigens. Promotes phagocytosis of opsonized antigens.

Cellular Location Cell membrane; Single-pass type I membrane protein

Tissue Location Found on monocytes, neutrophils and eosinophil platelets

Background

This MAb reacts with a CD32 (FcgRII) epitope distinct from that defined by MAb 8.26 and the epitope overlaps with that of MAb 7.30 (cluster 4). It displays a stronger reaction with Daudi than with U937 cells. The epitope is located in domain 2 of FcgRIIa. Its Fab'2 fragments block immune complex binding. CD32 (Fc?RII) is a type 1 transmembrane glycoprotein that mediates several functions including phagocytosis, cytotoxicity, and immunomodulation as well as platelet aggregation. Three genes (A, B, and C) encode CD32 and at least 6 isoforms are generated via alternative mRNA splicing, i.e., IIa1, IIa2, IIb1, IIb2, IIb3 and IIc. Monocytes/macrophages, placental trophoblasts and endothelial cells express all isoforms. In addition, the IIb isoform is expressed by B cells, and the IIa isoform by platelets, granulocytes and, weakly, by B cells. NK cells and neutrophils express Isoform IIc. CD32 binds weakly to the Fc region of monomeric IgG but more strongly to IgG aggregates and immune complexes.
