

# CD45RA (Leucocyte Marker) Antibody - With BSA and Azide

Mouse Monoclonal Antibody [Clone SPM504] Catalog # AH12210

#### **Product Information**

Application IHC, IF, FC
Primary Accession P08575
Other Accession 5788, 654514
Reactivity Human
Host Mouse
Clonality Monoclonal

**Isotype** Mouse / IgG1, kappa

Clone Names SPM504 Calculated MW 147486

#### Additional Information

**Gene ID** 5788

Other Names Receptor-type tyrosine-protein phosphatase C, 3.1.3.48, Leukocyte common

antigen, L-CA, T200, CD45, PTPRC, CD45

**Application Note** IHC~~1:100~500 IF~~1:50~200 FC~~1:10~50

**Storage** Store at 2 to 8°C.Antibody is stable for 24 months.

**Precautions** CD45RA (Leucocyte Marker) Antibody - With BSA and Azide is for research

use only and not for use in diagnostic or therapeutic procedures.

#### **Protein Information**

Name PTPRC ( HGNC:9666)

Synonyms CD45

**Function** Protein tyrosine-protein phosphatase required for T-cell activation through

the antigen receptor (PubMed:35767951). Acts as a positive regulator of T-cell coactivation upon binding to DPP4. The first PTPase domain has enzymatic activity, while the second one seems to affect the substrate specificity of the first one. Upon T-cell activation, recruits and dephosphorylates SKAP1 and FYN. Dephosphorylates LYN, and thereby modulates LYN activity (By similarity). Interacts with CLEC10A at antigen presenting cell-T cell contact; CLEC10A on immature dendritic cells recognizes Tn antigen- carrying PTPRC/CD45 receptor on effector T cells and modulates T cell activation

threshold to limit autoreactivity.

**Cellular Location** Cell membrane; Single-pass type I membrane protein. Membrane raft.

Synapse. Note=Colocalized with DPP4 in membrane rafts.

**Tissue Location** Isoform 1: Detected in thymocytes. Isoform 2: Detected in thymocytes.

Isoform 3: Detected in thymocytes. Isoform 4: Not detected in thymocytes. Isoform 5: Detected in thymocytes. Isoform 6: Not detected in thymocytes.

Isoform 7: Detected in thymocytes Isoform 8: Not detected in thymocytes.

## **Background**

Recognizes a protein of 205kDa-220kDa, identified as CD45RA (Workshop III). CD45RA is isoforms of the human leukocyte common antigen (CD45). Human CD45 contains three exons which encode peptide segments designated A, B and C, respectively. The differential splicing of the exons generates at least five isoforms, ABC, AB, BC, B and O. This antibody reacts with ABC and BC isoforms. CD45RA is expressed on 40-50% of peripheral CD4+ T-cells, 50% of peripheral CD8+ T-cells, B-cells, and leukemic B-cell lines. T-cells expressing CD45RA are naive or virgin T-cells. T-cells expressing CD45RO are memory T-cells. CD45RA and CD45RO define complementary, predominantly non-overlapping populations of resting peripheral T-cells. This MAb is useful in study on the subpopulation of CD4+ or CD8+ T-cells. It can especially be used to differentiate T-cell lymphomas (CD45RO +ve) from B cell lymphomas (CD45RA +ve).
