

Anti-ACTH (C-Terminal) Antibody

Mouse Monoclonal Antibody Catalog # AH13442

Product Information

Application IHC-P, IF, FC, E

Primary Accession P01189 **Other Accession** 1897 Reactivity Human Host Mouse Clonality Monoclonal Isotype Mouse / IgG1 **Clone Names** SPM501 Calculated MW 29424

Additional Information

Gene ID 5443

Other Names Adrenocorticotropin; alpha or beta or gamma Melanocyte Stimulating

Hormone (MSH) or Melanotropin; beta-Endorphin; beta or gamma Lipotropin

(LPH); CLIP; Met Enkephalin; POC; POMC

Application Note ELISA (For coating, order Ab without BSA); Flow Cytometry (0.5-1ug/million

cells); Immunofluorescence (1-2ug/ml); ,Immunohistology (Formalin-fixed) (0.5-1ug/ml for 30 minutes at RT),(Staining of formalin-fixed tissues requires boiling tissue sections in 10mM Citrate Buffer, pH 6.0, for 10-20 min followed by cooling at RT for 20 minutes),Optimal dilution for a specific application

should be determined.

Format 200ug/ml of Ab purified from Bioreactor Concentrate by Protein A/G.

Prepared in 10mM PBS with 0.05% BSA & 0.05% azide. Also available

WITHOUT BSA & azide at 1.0mg/ml.

Storage Store at 2 to 8°C.Antibody is stable for 24 months.

Precautions Anti-ACTH (C-Terminal) Antibody is for research use only and not for use in

diagnostic or therapeutic procedures.

Protein Information

Name POMC

Function [Corticotropin]: Stimulates the adrenal glands to release cortisol.

[Melanocyte-stimulating hormone beta]: Increases the pigmentation of skin

by increasing melanin production in melanocytes. [Met-enkephalin]:

Endogenous opiate.

Cellular Location Secreted {ECO:0000250 | UniProtKB:P01193}. Note=Melanocyte-stimulating

hormone alpha and beta-endorphin are stored in separate granules in hypothalamic POMC neurons, suggesting that secretion may be under the control of different regulatory mechanisms {ECO:0000250|UniProtKB:P01193}

Tissue Location ACTH and MSH are produced by the pituitary gland.

Background

ACTH (same as Corticotropin) is a 39 amino acid active peptide produced by the anterior pituitary. This MAb is specific to CLIP (aa25-39 of ACTH); does not react with Synacthen (aa1-24 of ACTH). POMC (pro-opiomelanocortin or corticotropin-lipotropin) is a 267 amino acid polypeptide hormone precursor that goes through extensive, tissue-specific posttranslational processing by convertases. POMC is cleaved into ten hormone chains named NPP, ACTH, alpha-MSH (Melanocyte Stimulating Hormone), beta-MSH, gamma-MSH, CLIP (corticotropin-like intermediary peptide), Lipotropin-beta, Lipotropin-gamma, beta-endorphin and Met-enkephalin. ACTH is also produced by cells of immune system (T-cells, B-cells, and macrophages) in response to stimuli associated with stress. Anti-ACTH is a useful marker in classification of pituitary tumors and the study of pituitary disease. It reacts with ACTH-producing cells (corticotrophs). It also may react with other tumors (e.g. some small cell carcinomas of the lung) causing paraneoplastic syndromes by secreting ACTH.
