Protein Information

Name LHX3

Function Transcription factor. Recognizes and binds to the consensus sequence motif

5'-AATTAATTA-3' in the regulatory elements of target genes, such as

glycoprotein hormones alpha chain CGA and visual system homeobox CHX10, positively modulating transcription; transcription can be co-activated by LDB2.

Synergistically enhances transcription from the prolactin promoter in

cooperation with POU1F1/Pit-1 (By similarity). Required for the establishment

of the specialized cells of the pituitary gland and the nervous system

(PubMed:21149718). Involved in the development of interneurons and motor

neurons in cooperation with LDB1 and ISL1 (By similarity).

Cellular Location Nucleus.
