**Precautions** TBX6 antibody - N-terminal region is for research use only and not for use in

diagnostic or therapeutic procedures.

#### **Protein Information**

Name TBX6

**Function** T-box transcription factor that plays an essential role in the determination of

the fate of axial stem cells: neural vs mesodermal. Acts in part by down-regulating, a specific enhancer (N1) of SOX2, to inhibit neural development. Seems to play also an essential role in left/right axis

determination and acts through effects on Notch signaling around the node as well as through an effect on the morphology and motility of the nodal cilia

(By similarity).

**Cellular Location** Nucleus {ECO:0000255|PROSITE-ProRule:PRU00201}.

**Tissue Location** Expressed in fetal tail bud, posterior spinal tissue, intervertebral disk and

testis. Also expressed in adult testis, kidney, lung, muscle and thymus
