### **Protein Information**

Name	KCNH3 ( <u>HGNC:6252</u> )
Synonyms	KIAA1282
Function	Pore-forming (alpha) subunit of a voltage-gated inwardly rectifying potassium channel (PubMed: <u>10455180</u> ). Charactherized by a fast rate of activation during depolarization followed by a rapid inactivation at much more depolarized value causing inward rectification due to a C-type inactivation mechanism (PubMed: <u>10455180</u> ). Exhibits a rapid recovery from inactivation (PubMed: <u>10455180</u> ).

Cellular Location	Cell membrane {ECO:0000250 UniProtKB:Q9WVJ0}; Multi-pass membrane protein {ECO:0000250 UniProtKB:Q9WVJ0} Note=Expression on the cell membrane requires at least one of the three glycosylation sites to carry a sugar chain irrespective of their positions. {ECO:0000250 UniProtKB:Q9WVJ0}
Tissue Location	Detected only in brain, in particular in the telencephalon (PubMed:10455180). Detected in the cerebral cortex, occipital pole, frontal and temporal lobe, putamen, amygdala, hippocampus and caudate nucleus (PubMed:10455180)
