Protein Information

Name	Eomes
Synonyms	Tbr2
Function	Functions as a transcriptional activator playing a crucial role during development. Functions in trophoblast differentiation and later in gastrulation, regulating both mesoderm delamination and endoderm specification (PubMed:10716450). Plays a role in brain development being required for the specification and the proliferation of the intermediate progenitor cells and their progeny in the cerebral cortex (PubMed:18171685, PubMed:18940588). Required for differentiation and migration of unipolar dendritic brush cells (PubMed:33488348). Also involved in the differentiation of CD8+ T-cells during immune response regulating the expression of lytic

	effector genes (PubMed: <u>14605368</u>).
Cellular Location	Nucleus.
Tissue Location	Expressed in CD8+ T-cells.
