Protein Information

Name	BLOC1S1
Synonyms	BLOS1, GCN5L1 {ECO:0000303|PubMed:382816
Function	Component of the BLOC-1 complex, a complex that is required for normal biogenesis of lysosome-related organelles (LRO), such as platelet dense granules and melanosomes (PubMed:17182842). In concert with the AP-3 complex, the BLOC-1 complex is required to target membrane protein cargos into vesicles assembled at cell bodies for delivery into neurites and nerve terminals (PubMed:17182842). The BLOC- 1 complex, in association with SNARE proteins, is also proposed to be involved in neurite extension (PubMed:17182842). As part of the BORC complex may play a role in

	lysosomes movement and localization at the cell periphery (PubMed:25898167). Associated with the cytosolic face of lysosomes, the BORC complex may recruit ARL8B and couple lysosomes to microtubule plus-end-directed kinesin motor (PubMed:25898167).
Cellular Location	Mitochondrion intermembrane space. Mitochondrion matrix. Cytoplasm, cytosol. Lysosome membrane
