Protein Information

Name	PDLIM5 {ECO:0000303 PubMed:15346770, ECO:0000312 HGNC:HGNC:17468}
Function	May play an important role in the heart development by scaffolding PKC to the Z-disk region. May play a role in the regulation of cardiomyocyte expansion. Isoforms lacking the LIM domains may negatively modulate the scaffolding activity of isoform 1. Overexpression promotes the development of heart hypertrophy. Contributes to the regulation of dendritic spine morphogenesis in neurons. May be required to restrain postsynaptic growth of excitatory synapses. Isoform 1, but not isoform 2, expression favors spine thinning and elongation.

Cellular Location	Postsynaptic density {ECO:0000250 UniProtKB:Q62920}. Presynapse {ECO:0000250 UniProtKB:Q62920}. Postsynapse {ECO:0000250 UniProtKB:Q62920}. Cytoplasm, cytosol {ECO:0000250 UniProtKB:Q62920}. Note=Detected both at presynaptic and postsynaptic sites, exclusively at excitatory synapses, but not inhibitory synapses, in hippocampal neurons {ECO:0000250 UniProtKB:Q62920}
Tissue Location	Heart and skeletal muscle specific. Expression is commonly increased in the brain of patients with bipolar disorder, schizophrenia, and major depression.
