Protein Information

Name	Tcea1
Function	Necessary for efficient RNA polymerase II transcription elongation past template-encoded arresting sites. The arresting sites in DNA have the property of trapping a certain fraction of elongating RNA polymerases that pass through, resulting in locked ternary complexes. Cleavage of the nascent transcript by S-II allows the resumption of elongation from the new 3'-terminus (By similarity).
Cellular Location	Nucleus {ECO:0000255 PROSITE-ProRule:PRU00649, ECO:0000255 PROSITE-ProRule:PRU00651}
