Protein Information

Name JAKMIP1

Synonyms GABABRBP, JAMIP1, MARLIN1

Function Associates with microtubules and may play a role in the

microtubule-dependent transport of the GABA-B receptor. May play a role in

JAK1 signaling and regulate microtubule cytoskeleton rearrangements.

Cellular Location Cytoplasm, cytoskeleton. Membrane; Peripheral membrane protein.

Note=Colocalizes with the microtubule network Localizes to the cell body and neurites of hippocampal neurons where it accumulates in granules. Localizes

to the tail and to a lower extent to the head of sperm cells

Tissue Location

Predominantly expressed in neural tissues and lymphoid cells (at protein level). Isoform 2, isoform 3 and isoform 4 are specifically expressed in brain and retina. Isoform 1 and isoform 5 are also detected in liver, lung and skeletal muscle. Also detected in testis and to a lower extent spleen and intestine
