Protein Information

Name	Abcb10 {ECO:0000312|MGI:MGI:1860508}
Function	ATP-dependent transporter located in the mitochondrial inner membrane that catalyzes the export of biliverdin from the mitochondrial matrix, and plays a crucial role in hemoglobin synthesis and antioxidative stress (PubMed:22240895, PubMed:24421385, PubMed:26053025, PubMed:28808058, PubMed:34011630). Participates in the early step of the heme biosynthetic process during insertion of iron into protoporphyrin IX (PPIX) (PubMed:24421385, PubMed:28808058). Involved in the stabilization of the iron transporter mitoferrin- 1/SLC25A37 (PubMed:19805291). In addition

	may be involved in mitochondrial unfolded protein response (UPRmt) signaling pathway, although ABCB10 probably does not participate in peptide export from mitochondria (By similarity).
Cellular Location	Mitochondrion inner membrane; Multi-pass membrane protein {ECO:0000250|UniProtKB:Q9NRK6}
Tissue Location	Expressed at particularly high levels in fetal liver, and erythroid tissues of embryos and adults. Found also in adult bone marrow, liver and kidney, and at lower levels in heart, brain and spleen.
