Protein Information

Name	ABCG5 (HGNC:13886)
Function	ABCG5 and ABCG8 form an obligate heterodimer that mediates Mg(2+)- and ATP-dependent sterol transport across the cell membrane (PubMed: 27144356). Plays an essential role in the selective transport of dietary plant sterols and cholesterol in and out of the enterocytes and in the selective sterol excretion by the liver into bile (PubMed: 11099417 , PubMed: 11138003 , PubMed: 15054092 , PubMed: 27144356). Required for normal sterol homeostasis (PubMed: 11099417 , PubMed: 11138003 , PubMed: 15054092). The heterodimer with ABCG8 has ATPase activity (PubMed: 16893193 , PubMed: 20210363 , PubMed: 27144356).
Cellular Location	Cell membrane; Multi-pass membrane protein. Apical cell membrane;

Multi-pass membrane protein

Tissue Location

Strongly expressed in the liver, lower levels in the small intestine and colon.
