Protein Information

Name	AWAT1
Synonyms	DGA2, DGAT2L3
Function	Acyltransferase that catalyzes the formation of ester bonds between fatty alcohols and fatty acyl-CoAs to form wax monoesters (PubMed: 15671038). Shows a strong preference for decyl alcohol (C10), with less activity towards C16 and C18 alcohols (PubMed: 15671038). Shows a strong preference for saturated acyl-CoAs (PubMed: 15671038).
Cellular Location	Endoplasmic reticulum membrane {ECO:0000250 UniProtKB:Q6E213};

Multi-pass membrane protein

Tissue Location

Predominantly expressed in skin, where it is limited to the sebaceous gland. Expressed in more mature, centrally located cells just before their rupture and sebum release. Also expressed in all tissues except spleen. Expressed at higher level in thymus, prostate and testis.
