Protein Information

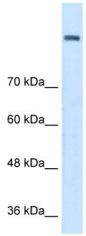

Name	AOC2 (HGNC:549)
Function	Catalyzes the oxidative deamination of primary amines to the corresponding aldehydes with the concomitant production of hydrogen peroxide and ammonia (PubMed:19588076). Has a preference for 2- phenylethylamine, tryptamine and tyramine (PubMed:19588076). Could also act on methylamine and benzylamine but much less efficiently (PubMed:19588076).
Cellular Location	[Isoform 1]: Cell membrane; Single-pass type II membrane protein {ECO:0000250|UniProtKB:Q16853}
