Protein Information

Name SOAT1 (HGNC:11177)

Function Catalyzes the formation of fatty acid-cholesterol esters, which are less

soluble in membranes than cholesterol (PubMed: 16154994, PubMed: 16647063, PubMed: 32433613, PubMed: 32433614,

PubMed:32944968, PubMed:9020103). Plays a role in lipoprotein assembly and dietary cholesterol absorption (PubMed:16154994, PubMed:9020103). Preferentially utilizes oleoyl-CoA ((9Z)-octadecenoyl-CoA) as a substrate: shows a higher activity towards an acyl-CoA substrate with a double bond at the delta-9 position (9Z) than towards saturated acyl-CoA or an unsaturated acyl-CoA with a double bond at the delta-7 (7Z) or delta-11 (11Z) positions

Cellular Location

Endoplasmic reticulum membrane; Multi-pass membrane protein
