Protein Information

Name	ASB8
Function	May be a substrate-recognition component of a SCF-like ECS (Elongin-Cullin-SOCS-box protein) E3 ubiquitin-protein ligase complex which mediates the ubiquitination and subsequent proteasomal degradation of target proteins. Inhibits IFN-beta production through the IRF3 signaling pathway by targeting TBK1 via 'Lys-48'-linked ubiquitination, leading to its proteasomal degradation (PubMed: 32298923).
Cellular Location	Cytoplasm
Tissue Location	Highest level of expression in skeletal muscle. Also expressed in heart, brain, placenta, liver, kidney and pancreas
