Protein Information

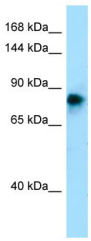

Name	ADAM2
Synonyms	FTNB
Function	Sperm surface membrane protein that may be involved in sperm- egg plasma membrane adhesion and fusion during fertilization. Could have a direct role in sperm-zona binding or migration of sperm from the uterus into the oviduct. Interactions with egg membrane could be mediated via binding between its disintegrin-like domain to one or more integrins receptors on the egg. This is a non catalytic metalloprotease-like protein.

Cellular Location	Membrane; Single-pass type I membrane protein.
Tissue Location	Expressed specifically in spermatogenic cells in the seminiferous cells. Not detected in fetal tissues
