### **Protein Information**

Name ENO2

**Function** Has neurotrophic and neuroprotective properties on a broad spectrum of

central nervous system (CNS) neurons. Binds, in a calcium- dependent manner, to cultured neocortical neurons and promotes cell survival (By

similarity).

**Cellular Location** Cytoplasm. Cell membrane. Note=Can translocate to the plasma membrane

in either the homodimeric (alpha/alpha) or heterodimeric (alpha/gamma)

form

#### **Tissue Location**

The alpha/alpha homodimer is expressed in embryo and in most adult tissues. The alpha/beta heterodimer and the beta/beta homodimer are found in striated muscle, and the alpha/gamma heterodimer and the gamma/gamma homodimer in neurons
