

# BMP4 antibody - C-terminal region

Rabbit Polyclonal Antibody Catalog # AI14914

#### **Product Information**

Application WB Primary Accession P12644

Other Accession <u>NM\_001202</u>, <u>NP\_001193</u>

**Reactivity**Human, Mouse, Rat, Rabbit, Pig, Goat, Dog, Guinea Pig, Horse, Bovine, Sheep **Predicted**Human, Mouse, Rat, Rabbit, Zebrafish, Pig, Chicken, Goat, Dog, Guinea Pig,

Horse, Bovine, Sheep

Host Rabbit
Clonality Polyclonal
Calculated MW 46555

### **Additional Information**

Gene ID 652

Alias Symbol BMP2B, BMP2B1, MCOPS6, OFC11, ZYME

Other Names Bone morphogenetic protein 4, BMP-4, Bone morphogenetic protein 2B,

BMP-2B, BMP4, BMP2B, DVR4

Format Liquid. Purified antibody supplied in 1x PBS buffer with 0.09% (w/v) sodium

azide and 2% sucrose.

**Reconstitution & Storage** Add 50 ul of distilled water. Final anti-BMP4 antibody concentration is 1

mg/ml in PBS buffer with 2% sucrose. For longer periods of storage, store at

20°C. Avoid repeat freeze-thaw cycles.

**Precautions**BMP4 antibody - C-terminal region is for research use only and not for use in

diagnostic or therapeutic procedures.

#### **Protein Information**

Name BMP4 ( HGNC:1071)

**Function** Growth factor of the TGF-beta superfamily that plays essential roles in many

developmental processes, including neurogenesis, vascular development, angiogenesis and osteogenesis (PubMed:31363885). Acts in concert with PTHLH/PTHRP to stimulate ductal outgrowth during embryonic mammary development and to inhibit hair follicle induction (By similarity). Initiates the canonical BMP signaling cascade by associating with type I receptor BMPR1A and type II receptor BMPR2 (PubMed:25868050, PubMed:8006002). Once all three components are bound together in a complex at the cell surface, BMPR2 phosphorylates and activates BMPR1A. In turn, BMPR1A propagates

signal by phosphorylating SMAD1/5/8 that travel to the nucleus and act as activators and repressors of transcription of target genes (PubMed: 25868050, PubMed: 29212066). Positively regulates the expression of odontogenic development regulator MSX1 via inducing the IPO7- mediated import of SMAD1 to the nucleus (By similarity). Required for MSX1-mediated mesenchymal molar tooth bud development beyond the bud stage, via promoting Wnt signaling (By similarity). Acts as a positive regulator of odontoblast differentiation during mesenchymal tooth germ formation, expression is repressed during the bell stage by MSX1- mediated inhibition of CTNNB1 signaling (By similarity). Able to induce its own expression in dental mesenchymal cells and also in the neighboring dental epithelial cells via an MSX1-mediated pathway (By similarity). Can also signal through non-canonical BMP pathways such as ERK/MAP kinase, PI3K/Akt, or SRC cascades (PubMed:31363885). For example, induces SRC phosphorylation which, in turn, activates VEGFR2, leading to an angiogenic response (PubMed:31363885).

**Cellular Location** 

Secreted, extracellular space, extracellular matrix

**Tissue Location** 

Expressed in the lung and lower levels seen in the kidney. Present also in normal and neoplastic prostate tissues, and prostate cancer cell lines
