

UQCRC2 Antibody - C-terminal region

Rabbit Polyclonal Antibody Catalog # AI15293

Product Information

Application WB Primary Accession P22695

Other Accession <u>NM 003366, NP 003357</u>

ReactivityHuman, Mouse, Rat, Rabbit, Pig, Goat, Guinea Pig, Horse, Bovine **Predicted**Human, Mouse, Rat, Rabbit, Pig, Goat, Guinea Pig, Horse, Bovine

Host Rabbit
Clonality Polyclonal
Calculated MW 48443

Additional Information

Gene ID 7385

Alias Symbol QCR2, UQCR2

Other Names Cytochrome b-c1 complex subunit 2, mitochondrial, Complex III subunit 2,

Core protein II, Ubiquinol-cytochrome-c reductase complex core protein 2,

UQCRC2

Format Liquid. Purified antibody supplied in 1x PBS buffer with 0.09% (w/v) sodium

azide and 2% sucrose.

Reconstitution & Storage Add 50 ul of distilled water. Final anti-UQCRC2 antibody concentration is 1

mg/ml in PBS buffer with 2% sucrose. For longer periods of storage, store at

20°C. Avoid repeat freeze-thaw cycles.

Precautions UQCRC2 Antibody - C-terminal region is for research use only and not for use

in diagnostic or therapeutic procedures.

Protein Information

Name UQCRC2

Function Component of the ubiquinol-cytochrome c oxidoreductase, a multisubunit

transmembrane complex that is part of the mitochondrial electron transport chain which drives oxidative phosphorylation. The respiratory chain contains

3 multisubunit complexes succinate dehydrogenase (complex II, CII),

ubiquinol-cytochrome c oxidoreductase (cytochrome b-c1 complex, complex III, CIII) and cytochrome c oxidase (complex IV, CIV), that cooperate to transfer electrons derived from NADH and succinate to molecular oxygen, creating an electrochemical gradient over the inner membrane that drives transmembrane transport and the ATP synthase. The cytochrome b-c1

complex catalyzes electron transfer from ubiquinol to cytochrome c, linking this redox reaction to translocation of protons across the mitochondrial inner membrane, with protons being carried across the membrane as hydrogens on the quinol. In the process called Q cycle, 2 protons are consumed from the matrix, 4 protons are released into the intermembrane space and 2 electrons are passed to cytochrome c (By similarity). The 2 core subunits UQCRC1/QCR1 and UQCRC2/QCR2 are homologous to the 2 mitochondrial-processing peptidase (MPP) subunits beta-MPP and alpha-MPP respectively, and they seem to have preserved their MPP processing properties (By similarity). May be involved in the in situ processing of UQCRFS1 into the mature Rieske protein and its mitochondrial targeting sequence (MTS)/subunit 9 when incorporated into complex III (Probable).

Cellular Location

Mitochondrion inner membrane {ECO:0000250 | UniProtKB:P07257}; Peripheral membrane protein {ECO:0000250 | UniProtKB:P07257}; Matrix side {ECO:0000250 | UniProtKB:P07257}
