Protein Information

Name GPR52 {ECO:0000303 | PubMed:9931487, ECO:0000312 | HGNC:HGNC:4508}

Function Gs-coupled receptor activated by antipsychotics reserpine leading to an

increase in intracellular cAMP and its internalization (PubMed: 24587241). May play a role in locomotor activity through modulation of dopamine, NMDA and

ADORA2A-induced locomotor activity. These behavioral changes are

accompanied by modulation of the dopamine receptor signaling pathway in striatum (PubMed: 24587241). Modulates HTT level via cAMP-dependent but

PKA independent mechanisms throught activation of RAB39B that

translocates HTT to the endoplasmic reticulum, thus avoiding proteasome

degradation (PubMed:25738228).

Cell ular Location Cell membrane; Multi-pass membrane protein.

Tissue Location Expressed in brain, especially in striatum.
