Anti-EMD / Emerin Antibody (N-Terminus)

Rabbit Anti Human Polyclonal Antibody
Catalog # ALS17986

Product Information

Application	WB, IHC-P, FC
Primary Accession	P50402
Predicted	Human
Host	Rabbit
Clonality	Polyclonal
Calculated MW	28994

Additional Information

Gene ID	2010
Alias Symbol	EMD
Other Names	EMD, EDMD, Emerin, LEM domain containing 5, LEMD5, STA
Reconstitution & Storage	Ammonium sulfate precipitation
Precautions	Anti-EMD / Emerin Antibody (N-Terminus) is for research use only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name	EMD (HGNC:3331)
Function	Stabilizes and promotes the formation of a nuclear actin cortical network. Stimulates actin polymerization in vitro by binding and stabilizing the pointed end of growing filaments (PubMed:15328537). Inhibits beta-catenin activity by preventing its accumulation in the nucleus. Acts by influencing the nuclear accumulation of beta-catenin through a CRM1-dependent export pathway (PubMed:16858403). Links centrosomes to the nuclear envelope via a microtubule association (PubMed:17785515). Required for proper localization of non-farnesylated prelamin-A/C (PubMed:19323649). Together with NEMP1, contributes to nuclear envelope stiffness in germ cells (PubMed:32923640). EMD and BAF are cooperative cofactors of HIV-1 infection. Association of EMD with the viral DNA requires the presence of BAF and viral integrase. The association of viral DNA with chromatin requires the presence of BAF and EMD.
Cellular Location	Nucleus inner membrane; Single-pass membrane protein; Nucleoplasmic side. Nucleus outer membrane. Note=Colocalized with BANF1 at the central region of the assembling nuclear rim, near spindle-attachment sites. The accumulation of different intermediates of prelamin-A/C (non-farnesylated or carboxymethylated farnesylated prelamin-A/C) in fibroblasts modify its

	localization in the nucleus
Tissue Location	Skeletal muscle, heart, colon, testis, ovary and pancreas

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
