

LGALS3 Antibody (C-term)

Mouse Monoclonal Antibody (Mab) Catalog # AM1951b

Product Information

Application WB, IHC-P, E **Primary Accession** P17931 Other Accession NP 002297.2 Reactivity Human Host Mouse Clonality Monoclonal Isotype IgG1,k **Clone Names** 320CT4.5.2 Calculated MW 26152 163-191 **Antigen Region**

Additional Information

Gene ID 3958

Other Names Galectin-3, Gal-3, 35 kDa lectin, Carbohydrate-binding protein 35, CBP 35,

Galactose-specific lectin 3, Galactoside-binding protein, GALBP, IgE-binding protein, L-31, Laminin-binding protein, Lectin L-29, Mac-2 antigen, LGALS3,

MAC2

Target/Specificity This LGALS3 antibody is generated from mice immunized with a KLH

conjugated synthetic peptide between 163-191 amino acids from the

C-terminal region of human LGALS3.

Dilution WB~~1:500~1000 IHC-P~~1:100~500 E~~Use at an assay dependent

concentration.

Format Purified monoclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein G column, followed by dialysis

against PBS.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions LGALS3 Antibody (C-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

Protein Information

Name LGALS3 (HGNC:6563)

Synonyms MAC2

Function Galactose-specific lectin which binds IgE. May mediate with the alpha-3,

beta-1 integrin the stimulation by CSPG4 of endothelial cells migration. Together with DMBT1, required for terminal differentiation of columnar epithelial cells during early embryogenesis (By similarity). In the nucleus: acts as a pre-mRNA splicing factor. Involved in acute inflammatory responses including neutrophil activation and adhesion, chemoattraction of monocytes macrophages, opsonization of apoptotic neutrophils, and activation of mast cells. Together with TRIM16, coordinates the recognition of membrane damage with mobilization of the core autophagy regulators ATG16L1 and

BECN1 in response to damaged endomembranes.

Cellular Location Cytoplasm. Nucleus. Secreted. Note=Secreted by a non- classical secretory

pathway and associates with the cell surface. Can be secreted; the secretion is

dependent on protein unfolding and facilitated by the cargo receptor TMED10; it results in protein translocation from the cytoplasm into the ERGIC (endoplasmic reticulum- Golgi intermediate compartment) followed by vesicle

entry and secretion (PubMed:32272059).

Tissue Location A major expression is found in the colonic epithelium. It is also abundant in

the activated macrophages. Expressed in fetal membranes.

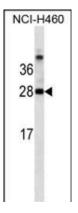

Background

This gene encodes a member of the galectin family of carbohydrate binding proteins. Members of this protein family have an affinity for beta-galactosides. The encoded protein is characterized by an N-terminal proline-rich tandem repeat domain and a single C-terminal carbohydrate recognition domain. This protein can self-associate through the N-terminal domain allowing it to bind to multivalent saccharide ligands. This protein localizes to the extracellular matrix, the cytoplasm and the nucleus. This protein plays a role in numerous cellular functions including apoptosis, innate immunity, cell adhesion and T-cell regulation. Alternate splicing results in multiple transcript variants.
