

GABARAP Antibody(Ascites)

Mouse Monoclonal Antibody (Mab) Catalog # AM2025a

Product Information

Application WB, E **Primary Accession** 095166

Other Accession P60517, Q8MK68, Q9DCD6, Q9GIW7, NP 009209.1

Reactivity Human, Mouse **Predicted** Bovine, Rabbit, Rat

Host Mouse
Clonality Monoclonal
Isotype IgG1
Clone Names 424CT5.1.6
Calculated MW 13918

Additional Information

Gene ID 11337

Other Names Gamma-aminobutyric acid receptor-associated protein, GABA(A)

receptor-associated protein, MM46, GABARAP, FLC3B

Target/Specificity Purified His-tagged GABARAP protein(Fragment) was used to produced this

monoclonal antibody.

Dilution WB~~1:500~2000 E~~Use at an assay dependent concentration.

Format Mouse monoclonal antibody supplied in crude ascites with 0.09% (W/V)

sodium azide.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions GABARAP Antibody(Ascites) is for research use only and not for use in

diagnostic or therapeutic procedures.

Protein Information

Name GABARAP (HGNC:4067)

Synonyms FLC3B

Function Ubiquitin-like modifier that plays a role in intracellular transport of GABA(A)

receptors and its interaction with the cytoskeleton (PubMed: 9892355). Involved in autophagy: while LC3s are involved in elongation of the

phagophore membrane, the GABARAP/GATE-16 subfamily is essential for a later stage in autophagosome maturation (PubMed:15169837, PubMed:20562859, PubMed:22948227). Through its interaction with the reticulophagy receptor TEX264, participates in the remodeling of subdomains of the endoplasmic reticulum into autophagosomes upon nutrient stress, which then fuse with lysosomes for endoplasmic reticulum turnover (PubMed:31006538). Also required for the local activation of the CUL3(KBTBD6/7) E3 ubiquitin ligase complex, regulating ubiquitination and degradation of TIAM1, a guanyl-nucleotide exchange factor (GEF) that activates RAC1 and downstream signal transduction (PubMed:25684205). Thereby, regulates different biological processes including the organization of the cytoskeleton, cell migration and proliferation (PubMed:25684205). Involved in apoptosis (PubMed:15977068).

Cellular Location

Cytoplasmic vesicle, autophagosome membrane. Endomembrane system {ECO:0000250|UniProtKB:P60517}. Cytoplasm, cytoskeleton {ECO:0000250|UniProtKB:P60517}. Golgi apparatus membrane {ECO:0000250|UniProtKB:P60517}. Cytoplasmic vesicle {ECO:0000250|UniProtKB:P60517}. Note=Largely associated with intracellular membrane structures including the Golgi apparatus and postsynaptic cisternae. Colocalizes with microtubules (By similarity) Also localizes to discrete punctae along the ciliary axoneme (By similarity). {ECO:0000250|UniProtKB:P60517, ECO:0000250|UniProtKB:Q9DCD6}

Tissue Location

Heart, brain, placenta, liver, skeletal muscle, kidney and pancreas.

Background

Gamma-aminobutyric acid A receptors [GABA(A) receptors] are ligand-gated chloride channels that mediate inhibitory neurotransmission. This gene encodes GABA(A) receptor-associated protein, which is highly positively charged in its N-terminus and shares sequence similarity with light chain-3 of microtubule-associated proteins 1A and 1B. This protein clusters neurotransmitter receptors by mediating interaction with the cytoskeleton.
