

# CYP27B1 Antibody (C-term)

Purified Mouse Monoclonal Antibody (Mab) Catalog # AM8669b

## **Product Information**

**Application** WB, E **Primary Accession** 015528

Reactivity Human, Rat, Mouse

PredictedHumanHostMouseClonalitymonoclonalIsotypeIgG1,κ

**Clone Names** 1981CT820.303.81

Calculated MW 56504

# **Additional Information**

**Gene ID** 1594

Other Names 25-hydroxyvitamin D-1 alpha hydroxylase, mitochondrial, 1.14.13.13,

25-OHD-1 alpha-hydroxylase, 25-hydroxyvitamin D(3) 1-alpha-hydroxylase, VD3 1A hydroxylase, Calcidiol 1-monooxygenase, Cytochrome P450 subfamily XXVIIB polypeptide 1, Cytochrome P450C1 alpha, Cytochrome P450VD1-alpha,

Cytochrome p450 27B1, CYP27B1, CYP1ALPHA, CYP27B

**Target/Specificity** This CYP27B1 antibody is generated from a mouse immunized with a KLH

conjugated synthetic peptide between 477-508 amino acids from the

C-terminal region of human CYP27B1.

**Dilution** WB~~1:1000 E~~Use at an assay dependent concentration.

**Format** Purified monoclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein G column, followed by dialysis

against PBS.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** CYP27B1 Antibody (C-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

### **Protein Information**

Name CYP27B1

Synonyms CYP1ALPHA, CYP27B

#### **Function**

A cytochrome P450 monooxygenase involved in vitamin D metabolism and in calcium and phosphorus homeostasis. Catalyzes the rate-limiting step in the activation of vitamin D in the kidney, namely the hydroxylation of 25-hydroxyvitamin D3/calcidiol at the C1alpha- position to form the hormonally active form of vitamin D3, 1alpha,25- dihydroxyvitamin D3/calcitriol that acts via the vitamin D receptor (VDR) (PubMed:10518789, PubMed: 10566658, PubMed: 12050193, PubMed: 22862690, PubMed: 9486994). Has 1alpha-hydroxylase activity on vitamin D intermediates of the CYP24A1-mediated inactivation pathway (PubMed: 10518789, PubMed: 22862690). Converts 24R, 25-dihydroxyvitamin D3/secalciferol to 1-alpha, 24, 25-trihydroxyvitamin D3, an active ligand of VDR. Also active on 25-hydroxyvitamin D2 (PubMed: 10518789). Mechanistically, uses molecular oxygen inserting one oxygen atom into a substrate, and reducing the second into a water molecule, with two electrons provided by NADPH via FDXR/adrenodoxin reductase and FDX1/adrenodoxin (PubMed: 22862690).

**Cellular Location** Mitochondrion membrane.

**Tissue Location** Kidney.

# **Background**

Catalyzes the conversion of 25-hydroxyvitamin D3 (25(OH)D) to 1-alpha,25-dihydroxyvitamin D3 (1,25(OH)2D) plays an important role in normal bone growth, calcium metabolism, and tissue differentiation.
