

# Anti-Ly-6k Antibody

Catalog # AN2154

## Product Information

---

|                          |                        |
|--------------------------|------------------------|
| <b>Application</b>       | WB                     |
| <b>Primary Accession</b> | <a href="#">Q17RY6</a> |
| <b>Host</b>              | Rabbit                 |
| <b>Clonality</b>         | Rabbit Polyclonal      |
| <b>Isotype</b>           | IgG                    |
| <b>Calculated MW</b>     | 18673                  |

## Additional Information

---

|                    |                                                                                                                                          |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gene ID</b>     | 54742                                                                                                                                    |
| <b>Other Names</b> | Lymphocyte antigen 6K, CO16                                                                                                              |
| <b>Dilution</b>    | WB~~1:1000                                                                                                                               |
| <b>Storage</b>     | Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles. |
| <b>Precautions</b> | Anti-Ly-6k Antibody is for research use only and not for use in diagnostic or therapeutic procedures.                                    |
| <b>Shipping</b>    | Blue Ice                                                                                                                                 |

## Background

---

To identify novel human head-and-neck squamous cell carcinoma (HNSCC)-associated Ly-6 members with squamous cell-associated expression patterns, a comprehensive gene-screening was performed, followed by expression analysis. Using this approach, the Ly-6K gene was identified as a novel member of the human Ly-6 family. Results show that Ly-6K is a potential target antigen for the diagnosis and therapy of HNSCC.

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
