

Cytokeratin 19 Antibody

Purified Mouse Monoclonal Antibody Catalog # AO1246a

Product Information

Application WB, E **Primary Accession** P08727 Reactivity Human Host Mouse Monoclonal Clonality **Clone Names** 4F12G9 Isotype IgG1 44106 **Calculated MW**

Description Cytokeratin 19, also known as KRT19, CK19, K1CS, MGC15366. Entrez

Protein NP_002267. It is a member of the keratin family. The keratins are intermediate filament proteins responsible for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. The type I cytokeratins consist of acidic proteins which are arranged in pairs of heterotypic keratin chains. Unlike its related family members, this smallest known acidic cytokeratin is not paired with a basic cytokeratin in epithelial cells. It is specifically expressed in the periderm, the transiently superficial

layer that envelopes the developing epidermis.

Immunogen Purified recombinant fragment of Cytokeratin 19 (aa80-400) expressed in E.

Coli strain.

Formulation Ascitic fluid containing 0.03% sodium azide.

Additional Information

Gene ID 3880

Other Names Keratin, type I cytoskeletal 19, Cytokeratin-19, CK-19, Keratin-19, K19, KRT19

Dilution WB~~1/500 - 1/2000 E~~N/A

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions Cytokeratin 19 Antibody is for research use only and not for use in diagnostic

or therapeutic procedures.

Protein Information

Name KRT19

Function Involved in th

Involved in the organization of myofibers. Together with KRT8, helps to link the contractile apparatus to dystrophin at the costameres of striated muscle.

Tissue Location

Expressed in a defined zone of basal keratinocytes in the deep outer root sheath of hair follicles. Also observed in sweat gland and mammary gland ductal and secretory cells, bile ducts, gastrointestinal tract, bladder urothelium, oral epithelia, esophagus, ectocervical epithelium (at protein level). Expressed in epidermal basal cells, in nipple epidermis and a defined region of the hair follicle. Also seen in a subset of vascular wall cells in both the veins and artery of human umbilical cord, and in umbilical cord vascular smooth muscle. Observed in muscle fibers accumulating in the costameres of myoplasm at the sarcolemma in structures that contain dystrophin and spectrin.
