

# NPC1 Antibody

Purified Mouse Monoclonal Antibody

Catalog # AO1840a

## Product Information

---

<b>Application</b>	WB, IHC, E
<b>Primary Accession</b>	<a href="#">O15118</a>
<b>Reactivity</b>	Human
<b>Host</b>	Mouse
<b>Clonality</b>	Monoclonal
<b>Clone Names</b>	8D10B6
<b>Isotype</b>	IgG1
<b>Calculated MW</b>	142167
<b>Description</b>	<p>This gene encodes a large protein that resides in the limiting membrane of endosomes and lysosomes and mediates intracellular cholesterol trafficking via binding of cholesterol to its N-terminal domain. It is predicted to have a cytoplasmic C-terminus, 13 transmembrane domains, and 3 large loops in the lumen of the endosome - the last loop being at the N-terminus. This protein transports low-density lipoproteins to late endosomal/lysosomal compartments where they are hydrolyzed and released as free cholesterol. Defects in this gene cause Niemann-Pick type C disease, a rare autosomal recessive neurodegenerative disorder characterized by over accumulation of cholesterol and glycosphingolipids in late endosomal/lysosomal compartments.</p>
<b>Immunogen</b>	Purified recombinant fragment of human NPC1 (AA: 34-174) expressed in E. Coli.
<b>Formulation</b>	Purified antibody in PBS with 0.05% sodium azide

## Additional Information

---

<b>Gene ID</b>	4864
<b>Other Names</b>	Niemann-Pick C1 protein, NPC1
<b>Dilution</b>	WB~~1/500 - 1/2000 IHC~~1/200 - 1/1000 E~~1/10000
<b>Storage</b>	Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.
<b>Precautions</b>	NPC1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

## Protein Information

---

<b>Name</b>	NPC1 ( <a href="#">HGNC:7897</a> )
<b>Function</b>	Intracellular cholesterol transporter which acts in concert with NPC2 and plays an important role in the egress of cholesterol from the endosomal/lysosomal compartment (PubMed: <a href="#">10821832</a> , PubMed: <a href="#">12554680</a> , PubMed: <a href="#">18772377</a> , PubMed: <a href="#">27238017</a> , PubMed: <a href="#">9211849</a> , PubMed: <a href="#">9927649</a> ). Unesterified cholesterol that has been released from LDLs in the lumen of the late endosomes/lysosomes is transferred by NPC2 to the cholesterol-binding pocket in the N-terminal domain of NPC1 (PubMed: <a href="#">18772377</a> , PubMed: <a href="#">19563754</a> , PubMed: <a href="#">27238017</a> , PubMed: <a href="#">27378690</a> , PubMed: <a href="#">28784760</a> , PubMed: <a href="#">9211849</a> , PubMed: <a href="#">9927649</a> ). Cholesterol binds to NPC1 with the hydroxyl group buried in the binding pocket (PubMed: <a href="#">19563754</a> ). Binds oxysterol with higher affinity than cholesterol. May play a role in vesicular trafficking in glia, a process that may be crucial for maintaining the structural and functional integrity of nerve terminals (Probable). Inhibits cholesterol-mediated mTORC1 activation through its interaction with SLC38A9 (PubMed: <a href="#">28336668</a> ).
<b>Cellular Location</b>	Late endosome membrane; Multi-pass membrane protein. Lysosome membrane; Multi-pass membrane protein

## Background

This gene encodes an iron containing glycoprotein which catalyzes the conversion of orthophosphoric monoester to alcohol and orthophosphate. It is the most basic of the acid phosphatases and is the only form not inhibited by L(+)-tartrate. ;
