Protein Information

Name ATG13

Synonyms KIAA0652

Function Autophagy factor required for autophagosome formation and mitophagy.

Target of the TOR kinase signaling pathway that regulates autophagy through

the control of the phosphorylation status of ATG13 and ULK1, and the

regulation of the ATG13-ULK1-RB1CC1 complex. Through its regulation of ULK1 activity, plays a role in the regulation of the kinase activity of mTORC1 and cell proliferation.

Cellular Location

Cytoplasm, cytosol. Preautophagosomal structure. Note=Under starvation conditions, is localized to puncate structures primarily representing the isolation membrane; the isolation membrane sequesters a portion of the cytoplasm resulting in autophagosome formation
