## Protein Information

---

<b>Name</b>	NAA10
<b>Synonyms</b>	ARD1, ARD1A, TE2
<b>Function</b>	Catalytic subunit of N-terminal acetyltransferase complexes which display alpha (N-terminal) acetyltransferase activity (PubMed: <a href="#">15496142</a> , PubMed: <a href="#">19420222</a> , PubMed: <a href="#">19826488</a> , PubMed: <a href="#">20145209</a> , PubMed: <a href="#">20154145</a> , PubMed: <a href="#">25489052</a> , PubMed: <a href="#">27708256</a> , PubMed: <a href="#">29754825</a> , PubMed: <a href="#">32042062</a> ). Acetylates amino termini that are devoid of initiator methionine (PubMed: <a href="#">19420222</a> ). The alpha (N-terminal) acetyltransferase activity may be important for vascular, hematopoietic and

neuronal growth and development. Without NAA15, displays epsilon (internal) acetyltransferase activity towards HIF1A, thereby promoting its degradation (PubMed:[12464182](#)). Represses MYLK kinase activity by acetylation, and thus represses tumor cell migration (PubMed:[19826488](#)). Acetylates, and stabilizes TSC2, thereby repressing mTOR activity and suppressing cancer development (PubMed:[20145209](#)). Acetylates HSPA1A and HSPA1B at 'Lys-77' which enhances its chaperone activity and leads to preferential binding to co-chaperone HOPX (PubMed:[27708256](#)). Acetylates HIST1H4A (PubMed:[29754825](#)). Acts as a negative regulator of sister chromatid cohesion during mitosis (PubMed:[27422821](#)).

#### Cellular Location

Cytoplasm. Nucleus. Note=Also present in the free cytosolic and cytoskeleton-bound polysomes.
