

AXIN1

Purified Mouse Monoclonal Antibody Catalog # AO2537a

Product Information

Application Primary Accession Reactivity Host Clonality Clone Names Isotype Calculated MW	WB, IHC, ICC, E O15169 Human Mouse Monoclonal 4E9F1 Mouse IgG2b 95635 Purified recombinant fragment of human AXIN1 (AA: 546-752) expressed in E
Immunogen	Purified recombinant fragment of human AXIN1 (AA: 546-752) expressed in E. Coli.
Formulation	Purified antibody in PBS with 0.05% sodium azide

Additional Information

Gene ID	8312
Other Names	AXIN; PPP1R49
Dilution	WB~~ 1/500 - 1/2000 IHC~~1:100~500 ICC~~ 1/50 - 1/250 E~~ 1/10000
Storage	Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.
Precautions	AXIN1 is for research use only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name	AXIN1
Synonyms	AXIN
Function	Component of the beta-catenin destruction complex required for regulating CTNNB1 levels through phosphorylation and ubiquitination, and modulating Wnt-signaling (PubMed: <u>12192039</u> , PubMed: <u>27098453</u> , PubMed: <u>28829046</u>). Controls dorsoventral patterning via two opposing effects; down-regulates CTNNB1 to inhibit the Wnt signaling pathway and ventralize embryos, but also dorsalizes embryos by activating a Wnt-independent JNK signaling pathway (PubMed: <u>12192039</u>). In Wnt signaling, probably facilitates the

	phosphorylation of CTNNB1 and APC by GSK3B (PubMed: <u>12192039</u>). Likely to function as a tumor suppressor. Enhances TGF-beta signaling by recruiting the RNF111 E3 ubiquitin ligase and promoting the degradation of inhibitory SMAD7 (PubMed: <u>16601693</u>). Also a component of the AXIN1- HIPK2-TP53 complex which controls cell growth, apoptosis and development (PubMed: <u>17210684</u>). Facilitates the phosphorylation of TP53 by HIPK2 upon ultraviolet irradiation (PubMed: <u>17210684</u>).
Cellular Location	Cytoplasm. Nucleus. Membrane {ECO:0000250 UniProtKB:O35625} Cell membrane {ECO:0000250 UniProtKB:O35625}. Note=MACF1 is required for its translocation to cell membrane (By similarity). On UV irradiation, translocates to the nucleus and colocalizes with DAAX (PubMed:17210684). {ECO:0000250 UniProtKB:O35625, ECO:0000269 PubMed:17210684}
Tissue Location	Ubiquitously expressed.
