Protein Information

Name	BCL11B
Synonyms	CTIP2, RIT1
Function	Key regulator of both differentiation and survival of T- lymphocytes during thymocyte development in mammals. Essential in controlling the responsiveness of hematopoietic stem cells to chemotactic signals by modulating the expression of the receptors CCR7 and CCR9, which direct the movement of progenitor cells from the bone marrow to the thymus (PubMed: 27959755). Is a regulator of IL2 promoter and enhances IL2

expression in activated CD4(+) T-lymphocytes (PubMed:[16809611](#)). Tumor-suppressor that represses transcription through direct, TFCOUP2-independent binding to a GC-rich response element (By similarity). May also function in the P53-signaling pathway (By similarity).

Cellular Location

Nucleus.

Tissue Location

Highly expressed in brain and in malignant T-cell lines derived from patients with adult T-cell leukemia/lymphoma
