Protein Information

Name	Cd24
Synonyms	Cd24a, Ly-52
Function	May have a pivotal role in cell differentiation of different cell types. May have a specific role in early thymocyte development. Signaling could be triggered by the binding of a lectin-like ligand to the CD24 carbohydrates, and transduced by the release of second messengers derived from the GPI-anchor. Modulates B-cell activation responses (By similarity). In association with SIGLEC10 may be involved in the selective suppression of the immune response to danger- associated molecular patterns (DAMPs) such as HMGB1, HSP70 and HSP90 (PubMed:19264983). Plays a role in the control of autoimmunity (PubMed:20200274).
Cellular Location	Cell membrane; Lipid-anchor, GPI-anchor.
Tissue Location	In lymphoid, myeloid, and erythroid cells.
