## Protein Information

---

<b>Name</b>	SLC25A12 ( <a href="#">HGNC:10982</a> )
<b>Function</b>	Mitochondrial electrogenic aspartate/glutamate antiporter that favors efflux of aspartate and entry of glutamate and proton within the mitochondria as

part of the malate-aspartate shuttle (PubMed:[11566871](#), PubMed:[19641205](#), PubMed:[24515575](#), PubMed:[38945283](#)). Also mediates the uptake of L-cysteinesulfinatate (3-sulfinat-L-alanine) by mitochondria in exchange of L-glutamate and proton (PubMed:[11566871](#)). Can also exchange L-cysteinesulfinatate with aspartate in their anionic form without any proton translocation (PubMed:[11566871](#)). Lacks transport activity towards L-glutamine or gamma-aminobutyric acid (GABA) (PubMed:[38945283](#)).

**Cellular Location**

Mitochondrion inner membrane; Multi-pass membrane protein

**Tissue Location**

Expressed predominantly in the heart and skeletal muscle, weakly in brain and kidney.

## Background

This gene encodes a calcium-binding mitochondrial carrier protein. The encoded protein localizes to the mitochondria and is involved in the exchange of aspartate for glutamate across the inner mitochondrial membrane. Polymorphisms in the gene encoding this protein may be associated with risk of autism. [provided by RefSeq].
