

# POLR2G Antibody (C-term)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP12458b

### **Product Information**

**Application** WB, FC, E **Primary Accession** P62487

Other Accession P62489, P62488, Q7ZW41, Q5E9B8, NP 002687.1

Reactivity Human

**Predicted** Bovine, Zebrafish, Mouse, Rat

HostRabbitClonalityPolyclonalIsotypeRabbit IgGClone NamesRB31966Calculated MW19294Antigen Region126-153

## **Additional Information**

Gene ID 5436

Other Names DNA-directed RNA polymerase II subunit RPB7, RNA polymerase II subunit

B7, DNA-directed RNA polymerase II subunit G, RNA polymerase II 19 kDa

subunit, RPB19, POLR2G, RPB7

Target/Specificity This POLR2G antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 126-153 amino acids from the

C-terminal region of human POLR2G.

**Dilution** WB~~1:1000 FC~~1:10~50 E~~Use at an assay dependent concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** POLR2G Antibody (C-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

# **Protein Information**

Name POLR2G

Synonyms RPB7

#### **Function**

Core component of RNA polymerase II (Pol II), a DNA-dependent RNA polymerase which synthesizes mRNA precursors and many functional non-coding RNAs using the four ribonucleoside triphosphates as substrates. Pol II is the central component of the basal RNA polymerase II transcription machinery. It is composed of mobile elements that move relative to each other. POLR2G/RPB7 is part of a subcomplex with POLR2D/RPB4 that binds to a pocket formed by POLR2A/RPB1, POLR2B/RPB2 and POLR2F/RPABC2 at the base of the clamp element. The POLR2D/RPB4- POLR2G/RPB7 subcomplex seems to lock the clamp via POLR2G/RPB7 in the closed conformation thus preventing double-stranded DNA to enter the active site cleft. The POLR2D/RPB4-POLR2G/RPB7 subcomplex binds single- stranded DNA and RNA.

**Cellular Location** 

Nucleus.

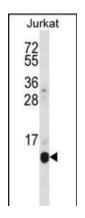

# **Background**

This gene encodes the seventh largest subunit of RNA polymerase II, the polymerase responsible for synthesizing messenger RNA in eukaryotes. The protein functions in transcription initiation, and is also thought to help stabilize transcribing polyermase molecules during elongation.
