Protein Information

Name	BTG3
Synonyms	ANA, TOB5
Function	Overexpression impairs serum-induced cell cycle progression from the

G0/G1 to S phase.

Tissue Location

Ubiquitous. High expression in the ventricular zone of the developing central nervous system. High in ovary, testis, prostate, thymus and lung.

Background

The protein encoded by this gene is a member of the BTG/Tob family. This family has structurally related proteins that appear to have antiproliferative properties. This encoded protein might play a role in neurogenesis in the central nervous system. Two transcript variants encoding different isoforms have been found for this gene.
