

# Thioredoxin (TRX) Antibody (N-term)

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP1337a

## **Product Information**

**Application** WB, E **Primary Accession** P10599 **Other Accession** Q5T937 Reactivity Human Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB5217 Calculated MW 11737 1-30 **Antigen Region** 

# **Additional Information**

**Gene ID** 7295

Other Names Thioredoxin, Trx, ATL-derived factor, ADF, Surface-associated sulphydryl

protein, SASP, TXN, TRDX, TRX, TRX1

**Target/Specificity**This Thioredoxin (TRX) antibody is generated from rabbits immunized with a

KLH conjugated synthetic peptide between 1-30 amino acids from the

N-terminal region of human Thioredoxin (TRX).

**Dilution** WB~~1:1000 E~~Use at an assay dependent concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation

followed by dialysis against PBS.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** Thioredoxin (TRX) Antibody (N-term) is for research use only and not for use

in diagnostic or therapeutic procedures.

## **Protein Information**

Name TXN

Synonyms TRDX, TRX, TRX1

**Function** Participates in various redox reactions through the reversible oxidation of

its active center dithiol to a disulfide and catalyzes dithiol-disulfide exchange reactions (PubMed:17182577, PubMed:19032234, PubMed:2176490). Plays a role in the reversible S- nitrosylation of cysteine residues in target proteins, and thereby contributes to the response to intracellular nitric oxide. Nitrosylates the active site Cys of CASP3 in response to nitric oxide (NO), and thereby inhibits caspase-3 activity (PubMed:16408020, PubMed:17606900). Induces the FOS/JUN AP-1 DNA-binding activity in ionizing radiation (IR) cells through its oxidation/reduction status and stimulates AP-1 transcriptional activity (PubMed:11118054, PubMed:9108029).

#### **Cellular Location**

Nucleus. Cytoplasm. Secreted Note=Translocates from the cytoplasm into the nucleus after phorbol 12- myristate 13-acetate induction (PMA) (PubMed:9108029). Predominantly in the cytoplasm in non irradiated cells (PubMed:11118054). Radiation induces translocation of TRX from the cytoplasm to the nucleus (PubMed:11118054). Secreted by a leaderless secretory pathway (PubMed:1332947).

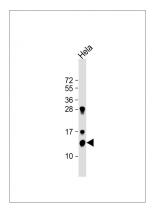

# **Background**

Thioredoxins (Trx) are small, multi-functional proteins with oxidoreductase activity and are ubiquitous in essentially all living cells. Trx contains a redox active disulfide/dithiol group within the conserved Cys-Gly-Pro-Cys active site. The two cysteine residues in the conserved active centers can be oxidized to form intramolecular disulfide bonds. Reduction of the active site disulfide in oxidized Trx is catalyzed by Trx reductase with NADPH as the electron donor. The reduced Trx is a hydrogen donor for ribonucleotide reductase, the essential enzyme for DNA synthesis, and a potent general protein disulfide reductase with numerous functions in growth and redox regulations. Specific protein disulfide targets for reduction by Trx include protein disulfide [Isomerase(PDI)] and a number of transcription factors such as p53, NF-kB and AP-1.Trx is also capable of removing H2O2, particularly when it is coupled with either methionine sulfoxide reductase or several isoforms of peroxiredoxins.
