

# IBSP Antibody (N-term)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP14114a

### **Product Information**

**Application** WB, E **Primary Accession** P21815 Other Accession NP 004958.2 Reactivity Human Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB34106 **Calculated MW** 35148 70-99 **Antigen Region** 

## **Additional Information**

Gene ID 3381

Other Names Bone sialoprotein 2, Bone sialoprotein II, BSP II, Cell-binding sialoprotein,

Integrin-binding sialoprotein, IBSP, BNSP

**Target/Specificity** This IBSP antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 70-99 amino acids from the N-terminal

region of human IBSP.

**Dilution** WB~~1:1000 E~~Use at an assay dependent concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** IBSP Antibody (N-term) is for research use only and not for use in diagnostic

or therapeutic procedures.

## **Protein Information**

Name IBSP

Synonyms BNSP

**Function** Binds tightly to hydroxyapatite (PubMed: <u>11459848</u>). Appears to form an

integral part of the mineralized matrix (PubMed:1818768). Probably important to cell-matrix interaction (PubMed:1818768). Promotes adhesion and migration of various cells via the alpha-V/beta-3 integrin receptor (ITGAV:ITGB3) (PubMed:10640428, PubMed:11459848, PubMed:24103036).

**Cellular Location** Secreted.

**Tissue Location** Expressed in bone (at protein level) (PubMed:11459848). Expressed in

trophoblast cells of placenta (at protein level) (PubMed:1818768). Expressed

in brain (PubMed:36261010)

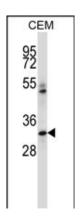

# **Background**

The protein encoded by this gene is a major structural protein of the bone matrix. It constitutes approximately 12% of the noncollagenous proteins in human bone and is synthesized by skeletal-associated cell types, including hypertrophic chondrocytes, osteoblasts, osteocytes, and osteoclasts. The only extraskeletal site of its synthesis is the trophoblast. This protein binds to calcium and hydroxyapatite via its acidic amino acid clusters, and mediates cell attachment through an RGD sequence that recognizes the vitronectin receptor.
