

DTX3L Antibody (Center)

Affinity Purified Rabbit Polyclonal Antibody (Pab)

Catalog # AP16451c

Product Information

Application	WB, E
Primary Accession	Q8TDB6
Other Accession	NP_612144.1
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Clone Names	RB36023
Calculated MW	83554
Antigen Region	453-482

Additional Information

Gene ID	151636
Other Names	E3 ubiquitin-protein ligase DTX3L, 632-, B-lymphoma- and BAL-associated protein, Protein deltex-3-like, Rhysin-2, Rhysin2, DTX3L, BBAP
Target/Specificity	This DTX3L antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 453-482 amino acids from the Central region of human DTX3L.
Dilution	WB~~1:1000 E~~Use at an assay dependent concentration.
Format	Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.
Storage	Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.
Precautions	DTX3L Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name	DTX3L
Synonyms	BBAP
Function	E3 ubiquitin-protein ligase which, in association with ADP-

ribosyltransferase PARP9, plays a role in DNA damage repair and in interferon-mediated antiviral responses (PubMed:[12670957](#), PubMed:[19818714](#), PubMed:[23230272](#), PubMed:[26479788](#)). Monoubiquitinates several histones, including histone H2A, H2B, H3 and H4 (PubMed:[28525742](#)). In response to DNA damage, mediates monoubiquitination of 'Lys-91' of histone H4 (H4K91ub1) (PubMed:[19818714](#)). The exact role of H4K91ub1 in DNA damage response is still unclear but it may function as a licensing signal for additional histone H4 post-translational modifications such as H4 'Lys-20' methylation (H4K20me) (PubMed:[19818714](#)). PARP1-dependent PARP9-DTX3L-mediated ubiquitination promotes the rapid and specific recruitment of 53BP1/TP53BP1, UIMC1/RAP80, and BRCA1 to DNA damage sites (PubMed:[23230272](#)). By monoubiquitinating histone H2B H2BC9/H2BJ and thereby promoting chromatin remodeling, positively regulates STAT1-dependent interferon-stimulated gene transcription and thus STAT1-mediated control of viral replication (PubMed:[26479788](#)). Independently of its catalytic activity, promotes the sorting of chemokine receptor CXCR4 from early endosome to lysosome following CXCL12 stimulation by reducing E3 ligase ITCH activity and thus ITCH-mediated ubiquitination of endosomal sorting complex required for transport ESCRT-0 components HGS and STAM (PubMed:[24790097](#)). In addition, required for the recruitment of HGS and STAM to early endosomes (PubMed:[24790097](#)). In association with PARP9, plays a role in antiviral responses by mediating 'Lys-48'-linked ubiquitination of encephalomyocarditis virus (EMCV) and human rhinovirus (HRV) C3 proteases and thus promoting their proteasomal-mediated degradation (PubMed:[26479788](#)).

Cellular Location

Cytoplasm. Nucleus. Early endosome membrane; Peripheral membrane protein; Cytoplasmic side. Lysosome membrane; Peripheral membrane protein; Cytoplasmic side. Note=Translocates to the nucleus in response to IFNG or IFNB1 stimulation (PubMed:[26479788](#)). Localizes at sites of DNA damage in a PARP1-dependent manner (PubMed:[23230272](#)) Localization to early endosomes is increased upon CXCL12 stimulation where it co-localizes with ITCH, CXCL4, HGS and STAM (PubMed:[24790097](#)) A minor proportion localizes to lysosomes (PubMed:[24790097](#))

Background

DTX3L functions as an E3 ubiquitin ligase (Takeyama et al., 2003 [PubMed [12670957](#)]).
